A
Which layer drives the fused score
20 most variable pathways measured in >= 2 layers (none with proteomics)
D-Glutamine and D-glutamate metabolism
Phosphonate and phosphinate metabolism
Phenylalanine, tyrosine and tryptophan biosynthesis
Autoimmune thyroid disease
Primary immunodeficiency
Valine, leucine and isoleucine biosynthesis
Graft-versus-host disease
Sulfur relay system
Type I diabetes mellitus
Allograft rejection
Vitamin B6 metabolism
Riboflavin metabolism
Sulfur metabolism
Caffeine metabolism
Glycosaminoglycan biosynthesis - keratan sulfate
Ubiquinone and other terpenoid-quinone biosynthesis
Neomycin, kanamycin and gentamicin biosynthesis
Intestinal immune network for IgA production
Glycosylphosphatidylinositol (GPI)-anchor biosynthesis
