
A
Fusion and naive pooling correlate only moderately
Two-dimensional binning of all observations
Pearson r = 0.48
285 pathways x 460 tumours
moGSVA fused score (ES_multi)
Pooled single-omics GSVA score
Observations
100
10
1
B
Disagreement is pathway specific
285 pathways scored by both methods
median r = 0.47
KEGG pathways
Per-pathway Pearson r (fused vs pooled)
C
Fusion keeps every layer, pooling keeps the transcriptome
Per-pathway correlation with each layer score
r (score vs per-omics ES)
CNA (285)
Methylation (283)
Transcriptomics (285)
Proteomics (111)
Pooled baseline
moGSVA fused
D
Lowest agreement
Maturity onset diabetes of the young
r = 0.05
Highest agreement
Phosphonate and phosphinate metabolism
r = 0.86
Fused score
Pooled score
